WO 2005/096017 PCT/GB2005/001205

CLAIMS

- 1. A method of decomposing a seismic wavefield, wherein a 3D wavefield is obtained by a cross-line acquisition and filtered applying a decomposition filter having two spatial directions to obtain a decomposed wavefield.
- 2. The method of claim 1 wherein the decomposition is

 10 for at least one of a group consisting of up- / down going
 decomposition , P/S decomposition, elastic decomposition and
 acoustic decomposition.
- 3. The method of claim 1 wherein the filter comprises in-line (k_x) and cross-line components (k_y) or a spatial representation of the in-line (k_x) and cross-line components (k_y) .
- 4. The method of claim 1 wherein the filter is applied 20 as a cascaded filter.
 - 5. The method of claim 1 wherein the filter is a compact filter.
- 25 6. The method of claim 1 wherein the filter filters an obtained pressure wavefield.
 - 7. The method of claim 1 wherein the filter exclusively filters an obtained pressure wavefield.

30

8. The method of claim 1 wherein the step of applying the filter is preceded by a calibration step to match

WO 2005/096017 PCT/GB2005/001205

geophone recordings with hydrophone recordings.

5

10

9. The method of claim 1 wherein the step of applying the filter is followed by a step of removing multiples from a component of the decomposed wavefield.

- 10. The method of claim 1 wherein the step of applying the filter is followed by a step of imaging or migrating the filtered wavefield to generated an image of subterranean formations.
- 11. The method of claim 1 wherein the wavefield is obtained through receivers located on the sea floor.
- 15 12. The method of claim 1 wherein the wavefield is obtained through receivers towed by a vessel.
